BIO ART CONTEST

Topic

FOOD AND FEED

There is no doubt that "Food and Feed" are very critical and fundamental elements for all living organisms on the earth. Although we became able to live in affluence of food due to increased food productivity followed by the growth of science and technology, some ironic situations are happening because of food issues. For instance, some people are struggling due to obesity while at some parts of the world the others are starving to death.
At Bio−art Contest 2018, we are planning to have time to share and contemplate various problems around 'Food and Feed' that the world is facing today.
